Section I. Atomic and molecular physics and related phenomena; experimental and theory

L-subshell vacancy production of fast argon ions in solids
Y. Zou, Y. Awaya, C.P. Bhalla, T. Kambara, Y. Kanai, M. Oura, Y. Nakai, K. Ando, A. Hitachi and S. Kravis 1
Models for L-shell filling of slow hollow atoms moving below a surface
N. Stolterfoht, R. Köhrbrück, M. Grether, A. Spieler, A. Arnau, R. Page, A. Saal, J. Thomaschewski and J. Bleck-Neuhaus 4
Mechanisms of ionization for low energy ion–atom collisions
S.Yu. Ovchinnikov and J.H. Macek 8
Multiple and inner-shell ionization by positron and electron impact
R. Hippler, S. Helms, U. Brinkmann, J. Deiwiks, H. Schneider, D. Segers and Ch. Dauwe 12
Scaling of cross sections in ion–atom collisions
R.D. DuBois 15
K-shell ionization cross sections for 75–300 keV protons on elements with $Z = 21$ to 30
S.J. Cipolla and C.J. Verzani 18
M-shell ionization in Gd, Er, and Au by slow protons
S.J. Cipolla 22
Identification of very low energy projectile autoionizing transitions in high velocity collisions using zero-degree Auger electron spectroscopy
T.J.M. Zouros, G. Toth, C. Liao, E.C. Montenegro, S. Hagmann, P. Richard, S. Grabbe, C.P. Bhalla and K.L. Wong 27
Correlation between energy loss and ion-induced electron emission of 1 MeV protons channeled along the ⟨100⟩ axis of a thin silicon crystal
Z.Y. Zhao, A.M. Arrale, S.L. Li, F.D. McDaniel, S. Matteson, D.L. Weathers, J.M. Anthony and B. Gnade 30
Dielectronic recombination from the ground and excited states of Li^+
P.A. Závodszky, W.G. Graham, R.R. Haar, W.W. Jacobs, J.R. Mowat, T. Rinckel and J.A. Tanis . . . 35
The angular distribution of Auger transitions in N_2
R.M. Wood, Q. Zheng, M.A. Mangan and A.K. Edwards 39
Interactions of circular Rydberg atoms with charged particles
J. Wang, R.E. Olson and J.H. McGuire 42
Electron loss mechanisms in collisions of He^+ ions with various targets
M.M. Sant'Anna, W.S. Melo, A.C.F. Santos, G.M. Sigaud and E.C. Montenegro 46
Convoy electron emission from surfaces
C.O. Reinhold, J. Burgdörfer, K. Kimura and M.-h. Mannami 50

Low energy electrons in slow ion–atom collisions
M. Pieksma, S.Y. Ovchinnikov, J. van Eck, W.B. Westerveld and A. Niehaus 54
Ionization and recombination in highly charged ion–electron collisions
A. Müller 58
Recoil momentum dynamics for the antiscreening process
E.C. Montenegro, W. Wu, K.L. Wong and C.L. Cocke 62
X-ray and Auger transition rates and energies of $3\ell 3\ell'$ states of two-electron ions
K.R. Karim 66
Anisotropic Auger emission from molecules
U. Becker and A. Menzel 68
Single capture and transfer ionization in collisions of Cl^{q+} projectile ions incident on helium
K.L. Wong, W. Wu, E.C. Montenegro, I. Ben-Itzhak, C.L. Cocke, J.P. Giese and P. Richard 72
Dielectronic processes producing radiative stabilization in 150 keV Ne^{10+} + He collisions
H. Merabet, F. Fremont, J.Y. Chesnel, G. Cremer, X. Husson, D. Lecler, A. Lepoutre, G. Rieger and N. Stolterfoht 75
A shape resonance observed in fast collisions of Li^- ions with gas targets
D.H. Lee, W.D. Brandon and D.J. Pegg 79
Collision-induced interaction cross sections of 1–7 MeV B_2 ions incident on an N_2 gas target
Y.D. Kim, J.Y. Jin, S. Matteson, D.L. Weathers, J.M. Anthony, P. Marshall and F.D. McDaniel 82
Electron–ion recombination using the modified cryring electron cooler
D.R. DeWitt, R. Schuch, S. Asp, C. Biedermann, H. Gao and W. Zong 86
Molecular imaging with fast beams
O. Heber, D. Zajfman, D. Kella, Z. Vager, R.L. Watson and V. Horvat 90
3-D imaging of binary dissociation events induced by heavy ion impact
V. Horvat, O. Heber, R.L. Watson, R. Parameswaran and J.M. Blackadar 94
Neutralization of H^- beams in "plasma-neutralizers"
F. Melchert, M. Benner, S. Kruedener and E. Salzborn 98
Monte-Carlo simulation of the production of H excited states by interaction of H^- with thin carbon foils
B. Gervais and J. Burgdörfer 101
One and two electron processes in fast collisions between protons and hydrogen molecules
I. Ben-Itzhak, V. Krishnamurthi, K.D. Carnes, H. Aliabadi, H. Knudsen and U. Mikkelsen 104
H^+ secondary ion emission produced by pre-impact surface ionization
E.F. da Silveira and M. Matos 107
Capture, ionisation and loss in swift $He^{1,2+}$–He collisions investigated by cold target recoil ion momentum spectroscopy
R. Dörner, V. Mergel, L. Spielberger, O. Jagutzki, S. Nüttgens, M. Unverzagt, H. Schmidt-Böcking, J. Ullrich, R.E. Olson, K. Tökesi, W.E. Meyerhof, W. Wu and C.L. Cocke 111
Spectral measurements of few-electron uranium ions produced and trapped in a high-energy electron beam ion trap
P. Beiersdorfer 114
Precision lifetime measurements using laser excitation of a fast atomic beam
C.E. Tanner, A.E. Livingston, R.J. Rafac, K.W. Kukla, H.G. Berry and C.A. Kurtz 117
Lifetimes of metastable molecular ions
D. Mathur 121
Intercombination transition rates measured at an ion storage ring
J. Doerfert and E. Träbert 124
A method for measuring mean lifetimes of short-lived (nanosecond region) molecular ions formed in fast collisions
I. Ben-Itzhak, J.P. Bouhnik, I. Gertner, O. Heber and B. Rosner 127
Angular distribution of photoelectrons from fixed-in-space molecules
E. Shigemasa 132

The need to include multipole effects beyond the dipole approximation in the description of photoionization both at nonrelativistic and relativistic energies
R.H. Pratt and L. LaJohn 136
Photodetachment cross sections
D.J. Pegg 140
Toward improved photon–atom scattering predictions
L. Kissel 144
Single and double ionization of atoms by Compton scattering
P.M. Bergstrom, Jr. 148
Potential energy effects in light emission and electron emission from a NaCl target bombarded by Ar ions
C. Assad and R.E. Tribble 152
New developments in the theory of bremsstrahlung
R.H. Pratt, C.D. Shaffer, N.B. Avdonina, X.-M. Tong and V. Florescu 156
Calculation of the two-photon bremsstrahlung spectra for a 70-keV electron on Al, Cu, Fe, Y and Ag atoms
A.V. Korol 160
High energy limit of atomic bremsstrahlung
K. Ishii 163
Bremsstrahlung from ions
N.B. Avdonina and R.H. Pratt 166
An accelerator based multi-coincidence electron–photon spectrometer for the measurement of bremsstrahlung and inner-shell ionization cross-sections
V. Ambrose and C.A. Quarles 170
Dipole-allowed transitions in collisions of charged particles and Rydberg atoms: method of virtual quanta in low velocity collisions
V.D. Irby, R.G. Rolfes, O.P. Makarov and K.B. MacAdam 174
The case for synchrotron radiation studies of two-electron ions, atoms, and molecules at the ALS
M.S. Lubell 177
Computer simulation of channeling in Si and GaAs crystals
F. Ditrói, J.D. Meyer, R.W. Michelmann and K. Bethge 182
Nonlinear effects on charged particle interactions in matter
J.M. Pitarke, A. Bergara and R.H. Ritchie 187
An overview of projectile-charge-state dependence of K-, L-, and M-shell ionization in thin solid targets for a variety of incident heavy ions from 0.1 to 5.7 MeV/u
H.L. Sun, J.L. Duggan, F.D. McDaniel and G. Lapicki 192
A new technique for the study of charge transfer in multiply charged ion–ion collisions
J.L. Shinpaugh, F.W. Meyer and S. Datz 198
Anti-capture into the continuum in electron–atom ionization
D.E. Golden, J. Xu, D.W. Mueller and J. Bernhard 202
Charge state dependence of the stopping power of 1 MeV/A ^{58}Ni-ions in thin carbon foils
C.M. Frey, G. Dollinger, A. Bergmaier, T. Faestermann and P. Maier-Komor 205
Extension of IMGO model to projectile velocities where electron-capture ~ electron-loss cross sections
G. Bissinger 210
Collisions of highly charged ions with electrons, atoms and surfaces
C.C. Havener, M.E. Bannister, L. Folkerts, J.W. Hale, M. Pieksma, J. Shinpaugh and F.W. Meyer . . . 213
Single and double charge exchange in fast ion–atom collisions
D. Belkić 218

Section II. Clusters

Cluster–solid interactions
T.A. Tombrello 225

Low-damage surface processing by gas cluster ion beams
M. Akizuki, J. Matsuo, M. Harada, S. Ogasawara, A. Doi, K. Yoneda, T. Yamaguchi, G.H. Takaoka, C.E. Ascheron and I. Yamada 229
Industrial applications of ICB deposition for the fabrication of electronic devices
K. Yamanishi, Y. Hashimoto and H. Tsukazaki 233
Sputtering effect of gas cluster ion beams
T. Yamaguchi, J. Matsuo, M. Akizuki, C.E. Ascheron, G.H. Takaoka and I. Yamada 237
A short review of ionized cluster beam technology
I. Yamada 240
Gas cluster ion beam equipments for industrial applications
J. Matsuo, H. Abe, G.H. Takaoka and I. Yamada 244
Molecular dynamics simulation of cluster ion bombardment of solid surfaces
Z. Insepov and I. Yamada 248

Section III. Synchrotron storage rings, X-ray sources, facilities and experiments

Synchrotron radiation excitation of hydrogen and deuterium to superexcited states
C.J. Latimer 253
Coincidence experiments following synchrotron radiation excitation
R. Wehlitz, J. Viefhaus, K. Wieliczek, B. Langer, S.B. Whitfield and U. Becker 257
The Aarhus storage ring – A research facility for physics, chemistry, medicine, and materials sciences
E. Uggerhøj 261
Experiments on cooled molecular ions
M. Larsson 267
Construction and commissioning of the positron accumulator ring for the APS
M. Borland 271
Status of and plans for the synchrotron radiation dedicated facilities at LSU-CAMD
H. Bluem and J.D. Scott 274

Section IV. Unique X-ray and gamma-ray sources

Parametric X-ray radiation from relativistic electrons in a crystal in the vicinity of and at angular distance from a Bragg direction
A.V. Shchagin, V.I. Pristupa and N.A. Khizhnyak 277
A compact source of intense 1–100 keV monochromatic X-rays from low energy protons
G. Arduini, C. Cicardi, M. Milazzo, L. Sangaletti and M. Silari 281
First results of the tunable monochromatic gamma-ray source at the Ghent 15 MeV linac
M. Bertschy, M. Crittin, J. Jolie, N. Warr and W. Mondelaers 286

Section V. Nuclear physics, radioactive beams, fusion, astrophysics, and related phenomena

A new UHV setup for investigations of narrow nuclear resonances with high energy resolution ion beams
M. Berheide, H.W. Becker, M. Buschmann, N. Piel, C. Rolfs, W.H. Schulte, G.E. Mitchell and J.S. Schweitzer 289
Lattice calculation for lepton capture from vacuum-pair production in relativistic heavy-ion collisions
J.C. Wells, V.E. Oberacker, M.R. Strayer and A.S. Umar 293
Status report on electron screening
C. Rolfs and E. Somorjai 297
The transfer angular momentum scheme in nuclear reactions
D. Robson 301
Parity violation in charged particle resonances
G.E. Mitchell and J.F. Shriner, Jr 305

Search for the two-phonon octupole vibrational state in ^{208}Pb
E.F. Moore, W. Henning, R.V.F. Janssens, T.L. Khoo, S.J. Sanders, I. Ahmad, H. Amro, D. Blumenthal, M.P. Carpenter, B. Crowell, M.W. Drigert, D. Gassman, R.G. Henry, T. Lauritsen, C.J. Lister and D. Nisius 308

Studies of light nuclei beyond the particle driplines: the two-proton emitter ^{12}O
R.A. Kryger, A. Azhari, M. Hellström, J.H. Kelley, T. Kubo, R. Pfaff, E. Ramakrishnan, B.M. Sherrill, M. Thoennessen, S. Yokoyama, R.J. Charity, J. Dempsey, A. Kirov, N. Robertson, D.G. Sarantites, L.G. Sobotka and J.A. Winger 312

Probing the three-nucleon force using nucleon–deuteron breakup reactions
C.R. Howell, H.R. Setze, R.T. Braun, D.E. Gonzalez Trotter, A.H. Hussein, C.D. Roper, F. Salinas, I. Slaus, W. Tornow, B. Vlahovic, R.L. Walter, G. Mertens, J.M. Lambert and H. Witala 316

The Coulomb dissociation of ^{8}B and the ^{8}B solar neutrino flux
M. Gai 320

Ghost beams and the energy spectra of anomalous positrons
J.D. Fox, K.W. Kemper and P.D. Cottle 324

Nuclear structure studies with (p, n) reactions at intermediate energies
B.D. Anderson 326

A review of radioactive beam facilities in the world
J.M. D'Auria 330

Target selection for the HRIBF project
J. Dellwo, G.D. Alton, J.C. Batchelder, J. Breitenbach, H.K. Carter, J.A. Chediak, G. Di Bartolo, S. Ichikawa, K. Jentoff-Nilsen and J. Kormicki 335

Experimental apparatus for the ORNL RIB facility
P.F. Mantica 338

Recent astrophysical measurements at NSCL
M. Hellström and D.J. Morrissey 342

Investigating the astrophysically important $E_x = 2.646$ MeV state in ^{20}Na
M.A. Hofstee, J.C. Blackmon, A.E. Champagne, N.P.T. Bateman, P.D. Parker, K. Yildiz, B.M. Young, R.B. Vogelaar, M.S. Smith and A.J. Howard 346

Nuclear astrophysics at the Holifield Radioactive Ion Beam Facility
M.S. Smith 349

Operations with tritium neutral beams on the tokamak fusion test reactor
L.R. Grisham, J.H. Kamperschroer, T. O'Connor, T. Stevenson, A. Von Halle, K.W. Wright and TFTR Group 353

Section VI. Positron sources, experiments, colliders, and theory

Free-volume distributions of polymers by positron annihilation spectroscopy: further experiences in using CONTIN for continuous lifetime distributions
G.H. Dai and Y.C. Jean 357

Positron and positronium collisions
G. Laricchia 363

Recent development in the theory of fast positron–atom collisions
S.J. Ward 368

Section VII. PIXE, microprobes, PIGE, XRF

Quality control of PIXE and PIGE nuclear analytical techniques in geological and environmental applications
O. Valković, M. Jakšić, S. Fazinić, V. Valković, G. Moschini and E. Menapace 372

Intercalibration standards for accelerator based analytical techniques
U. Wätjen, P. Maier-Komor, R. Pengo, N.I. Zaika, M. Budnar and V. Valkovic 376

A novel preconcentration technique for the PIXE analysis of water
J.M. Savage, R.F. Fernandez, W. Zhang, J.D. Robertson and V. Majidi 380

Heavy ion induced X-ray emission work at the TANDAR laboratory in Buenos Aires
M.J. Ozafrán, M.E. Vázquez, A.S.M.A. Romo, M.A. Cardona, M.E. Debray, D. Hojman, J.M. Kesque, A.J. Kreiner, J.J. Menendez, H. Somacal, J. Davidson and M. Davidson 384

Elemental analysis of the eggshell of the Karner Blue butterfly (*Lycaeides melissa samuelis*) using a nuclear microprobe
E.P. Nickles, H. Bakhru, H.T. Ghiradella and A. Haberl 387

"De re metallica" (G. Agricola) – IBA on air
C. Neelmeijer, W. Wagner, H.P. Schramm and U. Thiel 390

Application of PIXE for elemental analysis of ancient Chinese artifacts
E.K. Lin, C.W. Wang, Y.C. Yu, W.C. Cheng, C.H. Chang, Y.C. Yang and C.Y. Chang 394

Use of low-energy accelerators in Slovenia
M. Budnar and Ž. Šmit 399

Trace element characterization of coal fly ash particles
I. Bogdanović, S. Fazinić, S. Itskos, M. Jakšić, E. Karydas, V. Katselis, T. Paradellis, T. Tadić, O. Valković and V. Valković 402

Enhancements in the Livermore spectrum analysis package PIXEF
A.J. Antolak, G.S. Bench and M.L. Hildner 406

Industrial applications of high energy micro-beams
H. Bakhru, E. Nickles and A.W. Haberl 410

Nuclear microscopy for the study of coal combustion related phenomena
E. Cereda, G.M.B. Marcazzan, M. Pedretti, G.W. Grime and A. Baldacci 414

Transmission ion channeling images of crystal defects
P.J.C. King, M.B.H. Breese, P.R. Wilshaw, P.J.M. Smulders and G.W. Grime 419

Superconducting microprobe at Bochum
J. Meijer, A. Stephan, J. Adamczewski, H. Röcken, H.H. Bukow and C. Rolfs 423

Microbeam PIXE analysis using wavelength dispersive spectrometry
D.H. Morse, G.S. Bench, S.P.H.T. Freeman and A.E. Pontau 427

Section VIII. Materials analysis with ion beams, NRA, RBS, SIMS, elastic recoil detection, time-of-flight, medium energy ion scattering, channeling

Ion beam analysis of ultrathin dielectric films
I.J.R. Baumvol and C. Rolfs 431

Ion beam analysis of temperature-induced changes in the composition of float glass surfaces
M. Laube and F. Rauch 436

Nuclear reaction channeling
J.D. Meyer, R.W. Michelmann, F. Ditrói and K. Bethge 440

Nuclear reaction analysis of thin fluorinated polymer films
J. Maldener, K.-H. Gießler, T. Becht, F. Rauch, M. Stamm and E. Arai 444

Heavy ion recoil spectrometry of barium strontium titanate films
W.B. Stannard, P.N. Johnston, S.R. Walker, I.F. Bubb, J.F. Scott, D.D. Cohen, N. Dytlewski and J.W. Martin 447

^{16}O DIGME of high T_c materials
I.C. Vickridge, J. Tallon and M. Presland 450

Nuclear reaction analysis of nitrided Ti and Ti6Al4V
I.C. Vickridge, W.J. Trompetter, I.W.M. Brown and J.E. Patterson 454

Application of vapor phase decomposition techniques (VPD/AAS and ICP-MS) for trace element analysis in oxide coatings on silicon
S.H. Tan 458

Atomic transport during thermal growth of silicon nitride
I.J.R. Baumvol, F.C. Stedile, J.-J. Ganem, S. Rigo and I. Trimaille 462

RBS investigations of high-temperature reactions on graphite substrates
C.C. Eloi, J.D. Robertson and V. Majidi 468
Monolayer resolution in Rutherford backscattering spectroscopy
K. Kimura, K. Ohshima, K. Nakajima, Y. Fujii, M. Mannami and H.-J. Gossmann 472
Determination of accurate metal silicide layer thickness by RBS
J.F. Kirchhoff, S.M. Baumann, C. Evans, I. Ward and P. Coveney 476
SIMOX: processing, layer parameters design, and defects control
Y. Li, C.D. Marsh, A. Nejim, R.J. Chater, J.A. Kilner and P.L.F. Hemment 479
Material analysis using combined elastic recoil detection and Rutherford/enhanced Rutherford backscattering spectrometry
J.H. Burkhart and J.C. Barbour 484
Quantitative elastic recoil detection
A. Bergmaier, G. Dollinger and C.M. Frey 488
The impact of spectrometer efficiency on the trace-element sensitivity of time-of-flight medium energy backscattering
R.A. Weller 491
Medium energy ion scattering and STM studies on Cu/Si(111)
T. Koshikawa, T. Yasue, H. Tanaka, I. Sumita and Y. Kido 495
Charged particle probes to semiconductor superlattice
A.P. Pathak and V. Hari Kumar 499

Section IX. Activation and bulk analysis, inelastic neutron scattering, analysis programs, and sealed tubes

Marine sediments analysis by the elemental ratioing technique
A.M. Yusof, A.K.H. Wood and Z. Ahmad 502
Measurements and analysis of carbon and oxygen neutron inelastic cross sections below 10 MeV
J. Bendahan, J. Clayton, K. Fankhauser, T. Gozani, J. Krivicich, R. Loveman, E. Pentaleri, P. Ryge, P. Sawa and J. Stevenson 505
Gamma-ray spectroscopy and neutron activation analysis using GAMANAL-PC and QUACANAL
P.A. Beeley 509
Application of a sealed tube neutron generator to the characterization of very short half-life isomeric states
B. Antonot, S. Cluzeau, P. Le Tourneur and F. Bergamo 513
Performance characteristics of a compact D–T neutron generator system
H.G. Pfutzner, J.L. Groves and M. Mahdavi 516

Section X. Accelerator mass spectrometry, mass spectrometry, and related phenomena

Projectile X-ray detection: application and limits
M.J.M. Wagner, H.-A. Synal, M. Suter and J.-L. Debrun 519
Prospects for "iodine-129 dating" of marine organic matter using AMS
D.R. Schink, P.H. Santschi, O. Corapcioglu and U. Fehn 524
AFM studies of a new type of radiation defect on mica surfaces caused by highly charged ion impact
C. Ruehlicke, M.A. Briere and D. Schneider 528
Progress at the Groningen AMS facility
D.J.W. Mous, A. Gottdang, J. van der Plicht, S. Wijma and A. Zondervan 532
Depth profiling analysis of semiconductor materials by accelerator mass spectrometry
F.D. McDaniel, J.M. Anthony, S.N. Renfrow, Y.D. Kim, S.A. Datar and S. Matteson 537
PXAMS – projectile X-ray AMS: X-ray yields and applications
J.E. McAninch, G.S. Bench, S.P.H.T. Freeman, M.L. Roberts, J.R. Southon, J.S. Vogel and I.D. Proctor 541

Electric dissociation of negative ions at MeV energies
A.E. Litherland and M.-J. Nadeau 546
AMS studies of the diffusion of chlorine in silicon wafers
S.A. Datar, H.E. Gove, R.T.D. Teng and J.P. Lavine 549
Nuclear microscopy of sperm cell elemental structure
G.S. Bench, R. Balhorn and A.M. Friz 553
Biological sample preparation and ^{41}Ca AMS measurement at LLNL
S.P.H.T. Freeman, R.E. Serfass, J.C. King, J.R. Southon, Y. Fang, L.R. Woodhouse, G.S. Bench and J.E. McAninch 557

Section XI. Soft upsets

Direct measurement and improvement of local soft error susceptibility in dynamic random access memories
M. Takai, T. Kishimoto, H. Sayama, Y. Ohno, K. Sonoda, T. Nishimura, A. Kinomura, Y. Horino and K. Fujii 562

Section XII. Ion implantation and analysis, surface modification, SIMS, channeling instrumentation

In-situ capability of ion beam modification and characterization of materials at Los Alamos National Laboratory
N. Yu, M. Nastasi, T.E. Levine, J.R. Tesmer, M.G. Hollander, C.R. Evans and C.J. Maggiore 566
High current ion implantation by plasma immersion technique
R.W. Thomae, B. Seiler, H. Bender, J. Brutscher, R. Günzel, J. Halder, H. Klein, J. Müller and M. Sarstedt 569
High-resolution ion beam profiler for ion implanters
W.J. Szajnowski and K.G. Stephens 573
ICB deposition and epitaxial growth of GaAs thin films
M. Shinohara, F. Ohtani, O. Ishiyama, M. Asari and J. Saraie 576
Recent developments in the use of ion beams at Surrey
B.J. Sealy, R.M. Gwilliam, K.J. Reeson, J.E. Mynard and K.G. Stephens 580
Use of the temperature dependence of the therma-wave technique as a thermometer
R.D. Rathmell, D. Kamenitsa, S. Brubaker, R. Reece and N.O. Pearce 583
Nuclear methods in technology of Si:Er structures
V.O. Naidenov, N.A. Sobolev, O.B. Alexandrov, M.S. Bresler, O.V. Gusev, G.M. Gusinskii, E.I. Shek, M.I. Makaviichuk and E.O. Parshin 587
Modification of the optical properties of glass by sequential ion implantation
R.H. Magruder III, R.A. Zuhr and D.H. Osborne, Jr. 590
Implantation induced damage in III/V-heterostructures
A. Kieslich, H. Doleschel, J.P. Reithmaier, A. Forchel and N.G. Stoffel 594
Surface and interface structural control using coaxial impact-collision ion scattering spectroscopy (CAICISS)
M. Katayama, T. Nakayama, C.F. McConville and M. Aono 598
The separation of thin single crystal films from bulk diamond by MeV implantation
J.D. Hunn, S.P. Withrow, C.W. White, R.E. Clausing, L. Heatherly, C.P. Christensen and N.R. Parikh 602
Nitrogen implantation into amorphous carbon films: XPS, AES and Raman analyses
F.L. Freire Jr., C.A. Achete and G. Mariotto 606
Ion beam processing of bio-ceramics
A.M. Ektessabi 610
Stoichiometry changes during low energy oxygen bombardment
B. Brijs, W. De Coster, H. Bender, W. Storm, P. Osiceanu and W. Vandervorst 614

Damage production during MeV ion implantation in GaAs and InAs
T. Bachmann, E. Wendler, W. Wesch, O. Herre, R.J. Wilson, C. Jeynes, R.M. Gwilliam and B.J. Sealy 619

Medium energy ion beam analysis and modification of Langmuir–Blodgett thin films
J.H. Arps, R.A. Weller, Y.S. Tung and D.O. Henderson 623

SIMS study of deuterium trapping and migration in a $YBa_2Cu_3O_{7-\delta}$ thin film
Y. Li, J.A. Kilner, T.J. Tate, M.J. Lee, Y.H. Li and P.G. Quincey 627

Simulation of ion implantation in Si for 0.25 keV H^+ under channeling conditions
J.A. Nobel, J.R. Sabin and S.B. Trickey 632

Section XIII. Detectors and spectrometers

The Big-Bite Spectrometer for AGOR
A.M. van den Berg 637

A Compton-suppressed spectrometer for studies of chaos in nuclei
J.F. Shriner, Jr., E.G. Bilpuch, C.R. Bybee, G.E. Mitchell, E.F. Moore, J.D. Shriner and C.R. Westerfeldt 641

A four-detector spectrometer for $e^- - \gamma$ PAC on-line with the ISOLDE-CERN isotope separator
ISOLDE Collaboration (CERN), J.G. Marques, J.G. Correia, A.A. Melo, M.F. da Silva and J.C. Soares 645

A BGO detector for Positron Emission Profiling in catalysts
A.V.G. Mangnus, L.J. van IJzendoorn, J.J.M. de Goeij, R.H. Cunningham, R.A. van Santen and M.J.A. de Voigt 649

Gas-filled recoil separator for studies of heavy elements
M. Leino, J. Äystö, T. Enqvist, P. Heikkinen, A. Jokinen, M. Nurmia, A. Ostrowski, W.H. Trzaska, J. Uusitalo, K. Eskola, P. Armbruster and V. Ninov 653

Preliminary results with the CLAMSUD pion spectrometer at the Moscow Meson Factory
A. Badalà, R. Barbera, F. Librizzi, A. Longhitano, D. Nicotra, A. Palmeri, G.S. Pappalardo, F. Riggi, A. Santoro, R. Turrisi, V. Aseev, A. Feschenko, Yu. Gavrilov, F. Guber, M. Golubeva, T. Karavicheva, A. Kurepin, P. Ostroumov, V. Potapov, V. Tiflov and A. Zhuravlev 657

The DØ Detector at Fermilab
K. De 661

High performance, thermoelectrically cooled X-ray and gamma ray detectors
A.C. Huber, J.A. Pantazis and V. Jordanov 665

A particle telescope system for nuclear reaction identification
G.P. Chambers and G.K. Hubler 669

Gamma-ray imaging with Compton cameras
G.W. Phillips 674

High accuracy determination of neutron energies from 300 keV to 5 MeV
S.M. Grimes, T. Covell, D. Jacobs, Zhou Hongyu, F.B. Bateman, C.E. Brient and T.N. Massey 678

Section XIV. Accelerator technology

Technology transfer for industrial production of superconducting magnets for the RHIC project at BNL
P. Wanderer, M.D. Anerella, A.F. Greene, E. Kelly and E. Willen 681

A high-yield pulsing system using the TORVIS negative ion source
M.L. Sundquist, J.R. Adney and R.C. Schmidt 684

Research application of RFQ linacs
A. Schempp 688

Acceleration test of heavy ion RFQ linac at TIT
M. Okamura, M. Okada, T. Ito and T. Hattori 694

Recent developments at HVEE
D.J.W. Mous, A. Gottdang, R. van den Broek and R.G. Haitsma 697
New developments in high average power short-pulse induction accelerators for industrial and environmental applications
E.L. Neau and K.R. Prestwich 701
TESLA superconducting RF cavity development
The TESLA collaboration and K. Koepke 706
A 2.5 MeV electrostatic quadrupole DC accelerator for BNCT application
J.W. Kwan, O.A. Anderson, L.L. Reginato, M.C. Vella and S.S. Yu 710
Repetitively pulsed high power stacked Blumlein generators
F. Davanloo, D.L. Borovina, C.B. Collins, F.J. Agee and L.E. Kingsley 713
RF system research and development for the PEP-II B factory
R.A. Rimmer 717
Beam diagnostics using an emittance measurement device
M. Sarstedt, R. Becker, H. Klein, A. Maaser, J. Müller, R. Thomae and M. Weber 721
10 MeV, 10 kW e-beam processing linac
H. Anamkath, F. Gower, R. Mendonsa, K. Whitham, A. Zante, T. Allen, G. Pageau and B. Williams . 725

Section XV. Nuclear techniques for explosives and contraband detection

Explosives detection through fast-neutron time-of-flight attenuation measurements
J.C. Overley, M.S. Chmelik, R.J. Rasmussen, R.M.S. Schofield and H.W. Lefevre 728
System to detect contraband in cargo containers using fast and slow neutron irradiation and collimated gamma detectors
R.C. Smith, M.J. Hurwitz and K.-C. Tran 733
A mobile light source for carbon/nitrogen cameras
W.P. Trower, A.I. Karev, V.N. Melekhin, V.I. Shvedunov and N.P. Sobenin 736
Thermal neutron analysis (TNA) explosive detection based on electronic neutron generators
W.C. Lee, D.B. Mahood, P. Ryge, P. Shea and T. Gozani 739
Understanding the physics limitations of PFNA – the nanosecond pulsed fast neutron analysis
T. Gozani 743
Evaluation of neutron techniques for illicit substance detection
C.L. Fink, B.J. Micklich, T.J. Yule, P. Humm, L. Sagalovsky and M.M. Martin 748
Cargo inspection system based on pulsed fast neutron analysis
D.R. Brown and T. Gozani 753
Non-destructive characterization using pulsed fast-thermal neutrons
P.C. Womble, F.J. Schultz and G. Vourvopoulos 757

Section XVI. Tomography and radiography

Use of multiple CT scans to accommodate large objects and stretch dynamic range of detectability
E.A. Sivers 761
Time of flight fast neutron radiography
R. Loveman, J. Bendahan, T. Gozani and J. Stevenson 765
DIANE neutron radiography device performance: comparison with reactor beam
S. Cluzeau, P. Le Tourneur and W.E. Dance 769
Applied X-ray computed tomography
C.F. Buynak and R.H. Bossi 772

Section XVII. Radiation processing and effects

High energy electron beam processing experiments with induction accelerators
D.L. Goodman, D.L. Birx and V.R. Dave 775

A radiation effects facility using a 1.7 MV tandem accelerator
D.L. Damcott, J.M. Cookson, V.H. Rotberg and G.S. Was 780
On-site installation and shielding of a mobile electron accelerator for radiation processing
D. Catana, J. Panaitescu, S. Axinescu, D. Manolache, C. Matei, C. Corcodel, M. Ulmeanu and V. Bestea 784
Ion-irradiation induced solid-state phase transformation in some metal systems
B.X. Liu and Z.J. Zhang 787

Section XVIII. Accelerator targets

Metallurgical sample preparation at the Institute of Reference Materials and Measurements
C. Ingelbrecht 790

Section XIX. Safety

Safety of department of energy accelerators
A.E. Evans 794

Section XX. Medical applications, isotope production, and imaging

A high power target for the production of [^{18}F] fluoride
A.D. Roberts, L.C. Daniel and R.J. Nickles 797
Folate receptor imaging with ^{125}I labeled folic acid with a whole body small animal imaging device built with plastic scintillating optical fibers
P.V. Kulkarni, P.P. Antich, A. Constantinescu, J. Prior, T. Nguyen, J. Fernando, J.A. Anderson, S.D. Weitman, B.A. Kamen, R.W. Parkey, R.C. Chaney and E.J. Fenyves 800
Vanadium-48: A renewable source for transmission scanning with PET
R.D. Hichwa, D. Kadrmas, G.L. Watkins, S.D. Wollenweber, S. Maniam, L.L. Boles Ponto, J.C.W. Richmond and J.A. Koeppel 804
Acceleration test of 3.2 MeV deuteron IH linac for production of useful radio-isotopes
T. Hattori, M. Okamura, Y. Oguri, K. Sasa, T. Ito, M. Okada, T. Nakamura, H. Schubert, H. Morinaga, D. Dudu, G. Pascovici, E. Ivanof, V. Zoran, S. Yamaki, Y. Shida, T. Fujisawa, S. Seki and K. Furuno 807
A medical facility proposal to use the SSC linac
L.W. Funk 810
Refinements with targetry to overcome accelerator energy constraints
R.D. Finn, Y. Sheh, V. Bui, S.M. Larson and D. Schlyer 814
Production of radio-isotopes at North Shore University Hospital
R. Dahl, T. Chaly and R. Matacchieri 817
A compact hard X-ray source for medical imaging and biomolecular studies
D.B. Cline, A.A. Garren, M.A. Green, J. Kolonko and D. Madura 821
Positron sources produced with a medical cyclotron: advantages and some applications
C. Gonzalez-Lepera 824

Section XXI. Proton therapy, BNCT

Proton radiation therapy: a summary of the world wide experience
J.M. Sisterson 827
Overview of the MGH-Northeast Proton Therapy Center plans and progress
J. Flanz, S. Durlacher, M. Goitein, A. Levine, P. Reardon and A. Smith 830
Ion beams for cancer treatment – a perspective
W.T. Chu 835

Basic design considerations for a national laboratory to support advanced clinical applications of ion beams
M. Silari 839
INEL and ISU BNCT research using a 2 MeV RFQ-based neutron source
Y.D. Harker, J.F. Harmon and G.W. Irwin 843
The Argonne ACWL, a potential accelerator-based neutron source for BNCT
G.E. McMichael, T.J. Yule and X.-L. Zhou 847

List of Participants 851

Author index 869
